(b) the invention was patented or described in a printed publication in this or a foreign country or in public use or on sale in this country, more than one year prior to the date of application for patent in the United States.

(e) the invention was described in (1) an application for patent, published under section 122(b), by another filed in the United States before the invention by the applicant for patent or (2) a patent granted on an application for patent by another filed in the United States before the invention by the applicant for patent, except that an international application filed under the treaty defined in section 351(a) shall have the effects for purposes of this subsection of an application filed in the United States only if the international application designated the United States and was published under Article 21(2) of such treaty in the English language.

1. Claims 1, 2, 4, and, 5 are rejected under 35 U.S.C. 102(b or e) as being clearly anticipated by Beckhart (US 6,568,098).

Beckhart, a Microtool patent, teaches an alignment wafer (dummy wafer) comprising a multilayer carbon fiber composite (which is generic and includes any pitch based carbon fibers in a random or parallel order in any plastic).

Allowable Subject Matter

2. Claims 3, 6, and 7-8 are objected to as being dependent upon a rejected base claim, but would be allowable if rewritten in independent form including all of the limitations of the base claim and any intervening claims.

Claims 9-20 are allowable.

The cited patents disclose the state of the prior art.
